

# ELDRIDGE

**Eldridge AAA CLO ETF**  
**Trading Symbol: CLOX**  
**Listed on NYSE Arca, Inc.**

**Summary Prospectus**  
**January 1, 2025**  
**www.cloxfund.com**

Before you invest, you may want to review the Eldridge AAA CLO ETF (formerly the Panagram AAA CLO ETF) (the “Fund”) Statutory Prospectus and Statement of Additional Information, which contain more information about the Fund and its risks. The current Statutory Prospectus and Statement of Additional Information each dated January 1, 2025, as supplemented from time to time, are incorporated by reference into this Summary Prospectus. You can find the Fund’s Statutory Prospectus, Statement of Additional Information and other information about the Fund online at [www.cloxfund.com](http://www.cloxfund.com). You can also get this information at no cost by calling 1-800-617-0004 or by sending an email request to [ETF@usbank.com](mailto:ETF@usbank.com).

### **Investment Objective**

The Eldridge AAA CLO ETF seeks to generate current income, with a secondary objective of capital preservation.

### **Fees and Expenses of the Fund**

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

<b>Annual Fund Operating Expenses</b> <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.20%
Distribution and Service (Rule 12b-1) Fees	0.00%
Other Expenses	0.00%
<b>Total Annual Fund Operating Expenses</b>	<b>0.20%</b>

### **Example**

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

<b>One Year</b>	<b>Three Years</b>	<b>Five Years</b>	<b>Ten Years</b>
\$20	\$64	\$113	\$255

## **Portfolio Turnover**

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in the annual Fund operating expenses or in the Example, affect the Fund’s performance. During the Fund’s most recent fiscal year ended August 31, 2024, the Fund’s portfolio turnover rate was 19% of the average value of its portfolio.

## **Principal Investment Strategies**

The Fund is an actively managed exchange-traded fund (“ETF”) that pursues its investment objective by investing, under normal circumstances, at least 80% of its net assets (plus any borrowings made for investment purposes) in collateralized loan obligations (“CLOs”) that are rated, at the time of purchase, AAA or an equivalent rating by a nationally recognized statistical rating organization (“NRSRO”) (or, if unrated, securities deemed by the Adviser to be of comparable quality). CLOs are structured products with a “long-only” investment strategy (*i.e.*, a strategy that does not include short positions) that issue multiple tranches of asset-backed securities. CLOs are collateralized by a pool of loans, which may include, among others, senior secured loans, senior unsecured loans, and subordinate corporate loans. The Fund invests primarily in AAA rated tranches of CLOs, which is the highest quality rating that a CLO can receive. CLOs are securities structured to be exposed to the senior secured loans in a corporate capital structure, which means that the loans have payment priority over unsecured debt and common equity in a default situation. These loans are often issued as “covenant lite” loans, which have few or no financial maintenance covenants. “Financial maintenance covenants” are covenants that require a borrower to maintain certain financial metrics during the life of the loan, such as maintaining certain levels of cash flow or limiting leverage. In the absence of such covenants, the CLO manager may be unable to declare an event of default if financial performance deteriorates, renegotiate the terms of the loan based upon the elevated risk levels, or take other actions to help mitigate losses.

The Fund is a “non-diversified” fund, meaning that a relatively high percentage of its assets are invested in a limited number of issuers of securities. However, the Fund will not invest more than 20% of its total assets in CLOs managed by a single CLO manager. The Fund only invests in CLOs with a minimum initial total offering size of \$250 million. In addition to investments in CLOs rated, at the time of purchase, AAA, the Fund may also invest up to 20% of its total assets in CLOs rated AA or A by an NRSRO. The Fund invests primarily in CLOs that are U.S. dollar denominated, and the Fund may invest in CLOs of any maturity or duration. CLOs typically have floating or variable interest rates, though some CLOs have fixed rates. If a CLO receives multiple ratings from different NRSROs, the Fund will use the highest rating category.

The Fund’s portfolio managers select investments for the Fund by sourcing opportunities in primary (*i.e.*, the initial offering for a security) and secondary markets (*i.e.*, markets where the securities are traded following the initial offering) for CLO debt securities. The Adviser focuses on CLO tranches rated AAA, which are senior to other tranches of the CLO. In addition, the Adviser evaluates the Fund’s investment portfolio to balance total returns and capital protection by analyzing structural leverage (leverage embedded in the CLO) and portfolio composition.

The Fund is actively managed and does not seek to track the performance of any particular index. In selecting investments for the Fund, the Adviser applies a bottom-up approach that reviews the current market environment for potential investment opportunities, including newly issued and secondary market CLOs. The Adviser’s analysis of each CLO includes: assessment of the manager of the CLO; analysis of the CLO’s documentation, cash flow waterfall and structural terms; assessment of the CLO’s ability to meet principal and interest payments to its various tranches; performance of the CLO’s underlying

collateral and the CLO's tranches under stressed market conditions; and general industry trends and any changing financial market conditions. The Adviser monitors the Fund's investment portfolio on a daily basis and attempts to proactively position investments for changing market conditions, and the Fund may sell or reduce a position when the Adviser perceives a more attractive investment becomes available or the value of an investment becomes unattractive, taking into consideration current market conditions. The Fund may also sell an investment based on the Adviser's re-evaluation of an investment's credit profile. Although the Adviser uses due care in analyzing and monitoring the Fund's investment portfolio, there can be no assurance that such analysis and monitoring will reveal factors that may impair the value of a CLO investment.

### **Principal Risks**

As with any fund, there are risks to investing. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. In addition to possibly not achieving your investment goals, **you could lose all or a portion of your investment in the Fund over short or long periods of time.** The principal risks of investing in the Fund are summarized below.

**CLO Risk.** The risks of investing in CLO securities include both the credit risk associated with the underlying loans combined with the risks associated with the CLO structure governing the priority of payments (and any legal and counterparty risk associated with carrying out the priority of payments). This Fund intends to invest primarily in AAA rated tranches (or equivalent ratings by a NRSRO); however, these ratings do not constitute a guarantee of credit quality and it's possible that under stressed market environments these tranches could experience substantial losses due to defaults, write-downs of the equity or other subordinated tranches, increased sensitivity to defaults due to underlying collateral default and impairment of subordinated tranches, market anticipation of defaults, and general market aversion to CLO securities as an asset class. The most common risks associated with investing in CLOs are interest rate risk, credit risk, liquidity risk, prepayment risk (*i.e.*, the risk that in a declining interest rate period CLO tranches could be refinanced or paid off prior to their maturities and the Fund would then have to reinvest the proceeds at a lower rate), and the risk of defaults of the underlying assets.

**CLO Leveraging Risk.** CLOs are typically leveraged, and such leverage will magnify the loss on CLO investments, which may in turn magnify the loss experienced by the Fund. The cumulative effect of leverage with respect to any investments in a market that moves adversely to such investments could result in a substantial loss that would be greater than if the Fund's investments were not leveraged. The Fund may hold cash, sell investments or temporarily borrow from banks or other lenders to meet short-term liquidity needs, such as to satisfy redemption requests from Fund shareholders. The Fund intends to invest primarily in the most senior tranches of CLOs (those that are also AAA-rated), which generally are less affected by the effects of leverage than more junior tranches.

**ETF Risks.** The Fund is an ETF, and, as a result of its structure, it is exposed to the following risks:

- *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* Only a limited number of institutional investors (known as "Authorized Participants" or "APs") are authorized to purchase and redeem shares directly from the Fund. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, shares of the Fund may trade at a material discount to the Fund's net asset value ("NAV"), which may result in a widening of the bid and ask spread (*i.e.*, the current best prices to buy and sell the Fund), and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

- *Costs of Buying or Selling Shares.* Due to the costs of buying or selling shares of the Fund, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of shares may significantly reduce investment results and an investment in shares may not be advisable for investors who anticipate regularly making small investments.
- *Shares May Trade at Prices Other Than NAV.* As with all ETFs, shares of the Fund may be bought and sold in the secondary market at market prices. Although it is expected that the market price of shares of the Fund will approximate the intraday value of the Fund's holdings used to calculate the Fund's NAV, there may be times when the market price of shares is more than the intra-day NAV (premium) or less than the intra-day NAV (discount), which may result in a widening of the bid and ask spread, due to supply and demand of shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for shares in the secondary market, in which case such premiums or discounts may be significant.
- *Trading.* Although shares of the Fund are listed for trading on the NYSE Arca (the "Exchange"), there can be no assurance that an active trading market for shares will develop or be maintained or that shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the market for shares of the Fund may become less liquid in response to deteriorating liquidity in the markets for the Fund's underlying portfolio holdings. This adverse effect on liquidity for the Fund's shares, in turn, can lead to differences between the market price of the Fund's shares and the underlying value of those shares, which may result in a widening of the bid and ask spread. In addition, trading in Fund shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares of the Fund inadvisable.
- *Early Close/Trading Halt.* An exchange or market may close early or issue trading halts on specific securities or financial instruments. The ability to trade certain securities or financial instruments may be restricted, which may disrupt the Fund's creation and redemption process, potentially affect the price at which the Fund's shares trade in the secondary market, and/or result in the Fund being unable to trade certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments, and/or may incur substantial trading losses.
- *Listing Standards Risk.* The Fund is required to comply with listing requirements adopted by the Exchange. Non-compliance with such requirements may result in the Fund's shares being delisted by the Exchange. Any resulting liquidation of the Fund could cause the Fund to incur elevated transaction costs and could result in negative tax consequences for its shareholders.

**Cash Transaction Risk.** Unlike other ETFs, the Fund expects to effect most of its creations and redemptions primarily for cash, rather than in-kind securities. Cash purchases and sales may cause the Fund to incur portfolio transaction fees, gains or losses on the sales, or charges or delays in investing the cash that it would otherwise not incur if a purchase or sale was made on an in-kind basis.

**Newer Fund Risk.** As of the date of this Prospectus, the Fund has a limited operating history. As a result, prospective investors have a limited track record on which to base their investment decision.

**Covenant Lite Loan Risk.** The Fund may obtain exposure to loans that are "covenant lite." Covenants contained in loan documentation are intended to protect lenders by imposing certain restrictions and other limitations on a borrower's operations or assets and by providing certain information and consent rights to lenders. Covenant lite loans may lack financial maintenance covenants that in certain situations can allow lenders to claim a default on the loan to seek to protect the interests of the lenders. The absence of financial maintenance covenants in a covenant lite loan might result in a lower recovery in the event of a default by the borrower. Covenant lite loans have become much more prevalent in recent years.

**Broadly Syndicated Loans Risk.** The CLOs in which the Fund invests are typically composed of broadly syndicated loans (“BSLs”). BSLs are typically originated and structured by banks on behalf of large corporate borrowers. BSLs are typically distributed by the arranging bank to a diverse group of investors primarily consisting of: CLOs; senior secured loan and high yield bond mutual funds; closed-end funds, hedge funds, banks, and insurance companies; and finance companies. Investments in BSLs may expose the Fund to different risks, including liquidity risk, price volatility, ability to restructure loans, credit risks and less protective loan documentation.

**Debt Securities Risk.** The Fund’s investment in debt securities may subject it to the following risks:

- *Liquidity Risk.* Liquidity risk refers to the possibility that the Fund may not be able to sell or buy a security or close out an investment contract at a favorable price or time. Consequently, the Fund may have to accept a lower price to sell a security, sell other securities to raise cash, or give up an investment opportunity, any of which could have a negative effect on the Fund’s performance. Infrequent trading of securities also may lead to an increase in their price volatility. CLOs, and their underlying loan obligations, are typically not registered for sale to the public and therefore are subject to certain restrictions on transfer and sale, potentially making them less liquid than other types of securities.
- *Interest Rate Risk.* As interest rates decrease, issuers of the underlying loan obligations may refinance any floating rate loans, which will result in a reduction in the principal value of the CLO’s portfolio and require the CLO to reinvest cash at an inopportune time. Conversely, as interest rates rise, borrowers with floating rate loans may experience difficulty in making payments, resulting in delinquencies and defaults, which will result in a reduction in cash flow to the CLO and the CLO investors, including the Fund. An increase in interest rates may cause the value of fixed-income securities held by the Fund to decline. The Fund may be subject to a greater risk of rising interest rates due to inflationary trends and the effect of government fiscal and monetary policy initiatives and resulting market reaction to those initiatives.
- *Floating Rate Obligations Risk.* Securities with floating or variable interest rates can be less sensitive to interest rate changes than securities with fixed interest rates, but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating rate securities will not generally increase in value if interest rates decline. A decline in interest rates may result in a reduction of income received from floating rate securities held by the Fund and may adversely affect the value of the Fund’s shares.
- *Credit Risk.* Debt issuers and other counterparties may not honor their obligations. For CLOs, the primary source of credit risk is the ability of the underlying portfolio of loans to generate sufficient cash flow to pay investors on a full and timely basis when principal and/or interest payments are due. Default in payment on the underlying loans will result in less cash flow from the underlying portfolio and, in turn, less funds available to pay investors in the CLO.
- *Call Risk.* CLO securities are issued with a non-call period. After the end of the non-call period, the majority investor in the equity tranche can call (*i.e.* redeem or refinance) the securities issued by the CLO in full. The Fund may not be able to accurately predict when or which of its CLO investments may be called, resulting in the Fund having to reinvest the proceeds in unfavorable market conditions (*i.e.* at lower spreads), which could cause a decline in the Fund’s income.
- *Extension Risk.* When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, causing the value of these securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to future changes in interest rates.

**Income Risk.** The Fund's income will decline if interest rates fall. This decline in income would occur because the CLO debt instruments held by the Fund generally all have floating or variable interest rates.

**Valuation Risk.** The CLO securities in which the Fund invests may be priced differently than the value realized upon such security's sale. In times of market instability, valuation may be more unreliable. The structure of certain CLOs may subject them to price volatility and enhanced liquidity and valuation risk in times of market stress.

**CLO Manager Risk.** The Fund intends to invest in CLO securities issued by CLOs that are managed by third-party collateral managers. The Fund is dependent on the skill and expertise of such managers. CLO managers are responsible for selecting, managing, and replacing the underlying bank loans within a CLO. There can be no guarantee that any collateral manager will continue to manage such CLO through the life of the investment. Collateral managers are subject to removal or replacement by other holders of CLO securities or may voluntarily resign.

**Newly Issued Securities Risk.** The Fund may invest in newly issued securities or "new issues." New issues may not be consistently available to the Fund for investing, particularly as the Fund's asset base grows. New issues may be volatile in price due to the absence of a prior trading market, limited quantities available, and an extended settlement period.

**Extended Settlement Risk.** New issue CLOs purchased in the primary market typically experience extended settlement periods, often longer than seven days. During the settlement window, between purchasing and settlement, these securities are typically less liquid than secondary market purchases. In such circumstances the Fund bears a risk of loss if the value of the CLO declines before the settlement date or if the Fund is required to sell the CLO prior to settlement. There is also the risk that the security will not be issued or that the counterparty will not meet its obligation, resulting in a loss of the investment opportunity.

**Market Events Risk.** One or more markets in which the Fund invests may go down in value, including the possibility that the markets will go down sharply and unpredictably. This may be due to numerous factors, including interest rates, the outlook for corporate profits, the health of the national and world economies, national and world social and political events, and the fluctuation of other stock markets around the world.

**Privately Issued Securities Risk.** CLO securities are generally privately issued securities, and are normally purchased pursuant to Rule 144A or Regulation S under the Securities Act of 1933, as amended (the "Securities Act"). Privately issued securities typically may be resold only to qualified institutional buyers, in a privately negotiated transaction, to a limited number of purchasers, or in limited quantities after they have been held for a specified period of time and other conditions are met for an exemption from registration. Because there may be relatively few potential purchasers for such securities, especially under adverse market or economic conditions or in the event of adverse changes in the financial condition of the issuer, the Fund may find markets for these securities are more thinly traded. At times, it also may be more difficult to determine the fair value of such securities for purposes of computing the Fund's NAV due to the absence of an active trading market.

**Management Risk.** The Fund's principal investment strategies may involve actively trading securities, which could result in a high portfolio turnover rate, which could increase transaction costs (thus lowering performance) and taxable distributions.

**Portfolio Turnover Risk.** The Fund may experience an increased rate of portfolio turnover which could result in higher transaction costs and potential for taxable capital gains, both of which could have a negative effect on the Fund's performance. The "Financial Highlights" section of this Prospectus shows the Fund's historical portfolio turnover rates.

***Non-diversified Fund Risk.*** The Fund is classified as a “non-diversified” fund under the Investment Company Act of 1940 (the “1940 Act”), as amended. Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. Moreover, the gains and losses on a single investment may have a greater impact on the Fund’s NAV and may make the Fund more volatile than more diversified funds.

### **Performance**

Performance information will be available once the Fund has at least one calendar year of performance. The Fund’s past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future and does not guarantee future results. Updated performance information is available on the Fund’s website at [www.cloxfund.com](http://www.cloxfund.com) or by calling the Fund toll-free at 800-617-0004.

### **Management**

#### ***Investment Adviser***

Eldridge Structured Credit Advisers, LLC (“Eldridge Structured Credit Advisers” or “Adviser”) is the Fund’s investment adviser.

#### ***Portfolio Managers***

Mr. Tony Minella, Mr. Tarek Barbar and Mr. Andrew Ward are the portfolio managers jointly responsible for the day-to-day management of the Fund. Messrs. Minella, Barbar and Ward have each managed the Fund since November 2024.

### **Purchase and Sale of Fund Shares**

Shares of the Fund are listed on the Exchange, and individual shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because shares of the Fund trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems its shares at NAV only in large specified numbers of shares known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Investors may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares (bid) and the lowest price a seller is willing to accept for shares (ask) when buying or selling shares in the secondary market (the “bid-ask spread”). Recent information about the Fund, including its NAV, market price, premiums and discounts, and bid-ask spreads is available on the Fund’s website at [www.cloxfund.com](http://www.cloxfund.com).

### **Tax Information**

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

### **Payments to Broker-Dealers and Other Financial Intermediaries**

If you purchase shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable

about exchange traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
